

# DATABASE MAIL

## 1. Configure Database Mail

This topic describes how to enable and configure Database Mail using the Database Mail Configuration Wizard and create a Database Mail. Use the **DatabaseMail XPs** option to enable Database Mail on this server.

Before run this command, the database should not have external connections. So, stop all application that connect to database or set the database to single user mode.

```
USE [master]
```

```
ALTER DATABASE DatabaseName SET ENABLE_BROKER WITH NO_WAIT
```

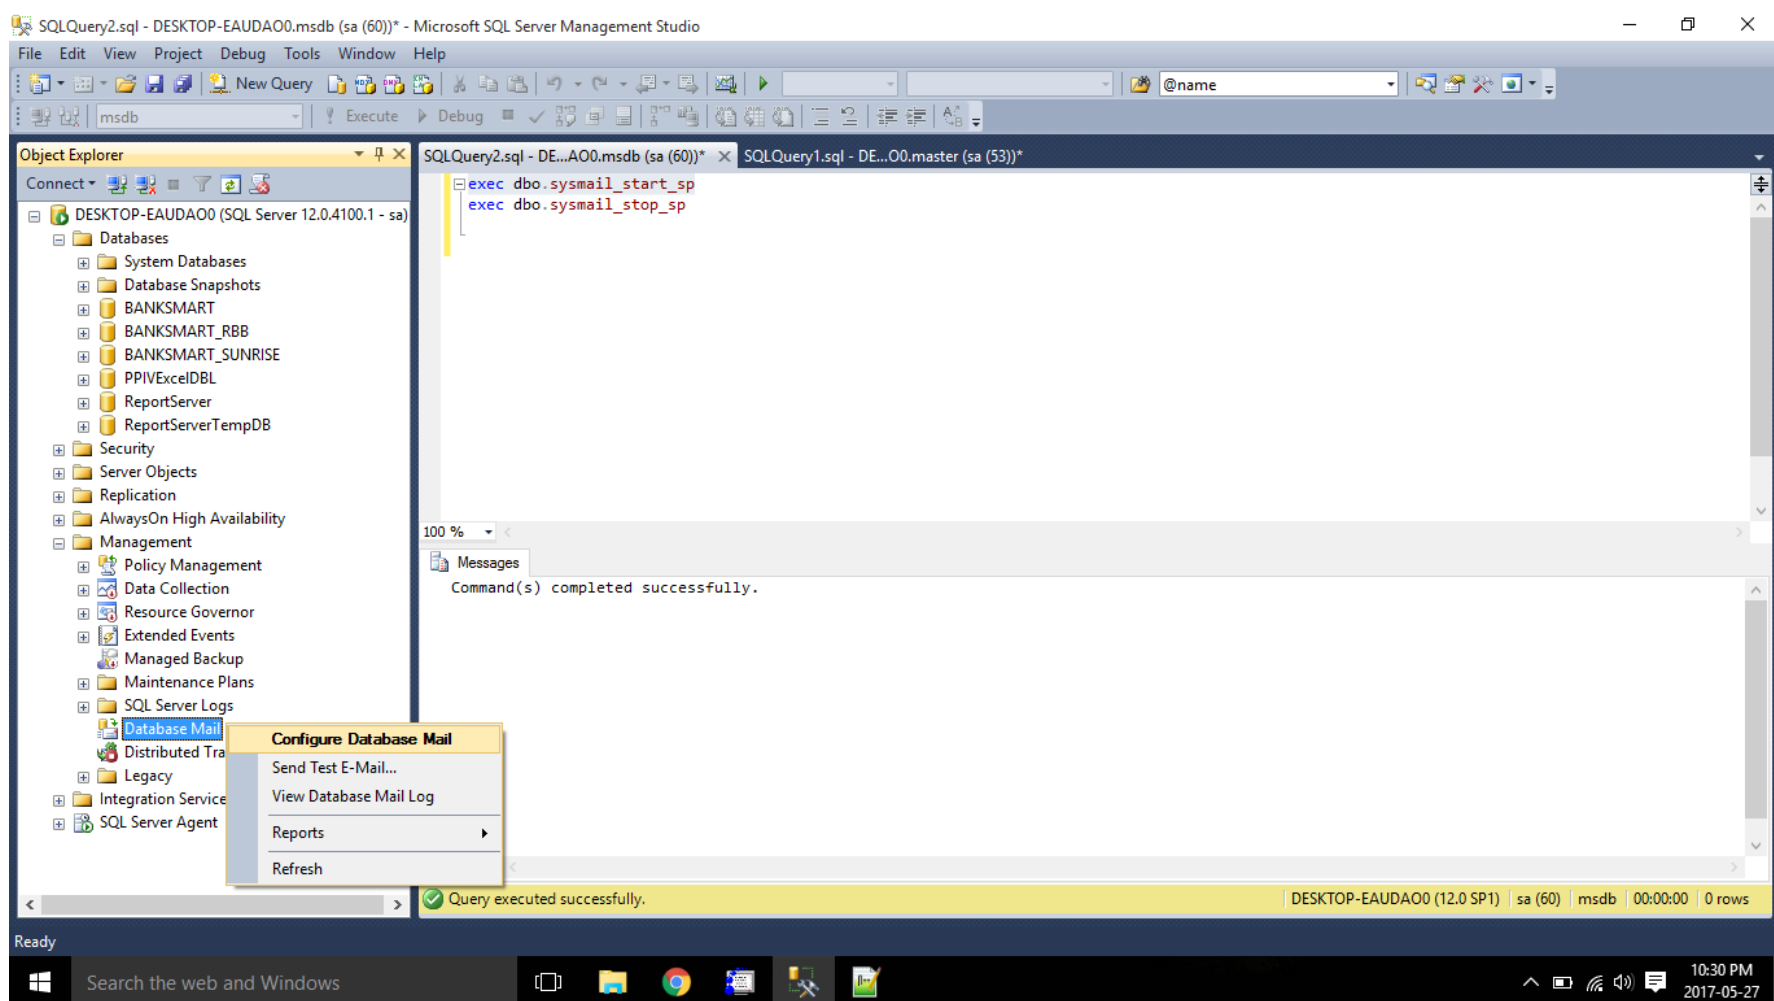

```
GO
```

```
EXEC sp_configure 'show advanced options', 1
```

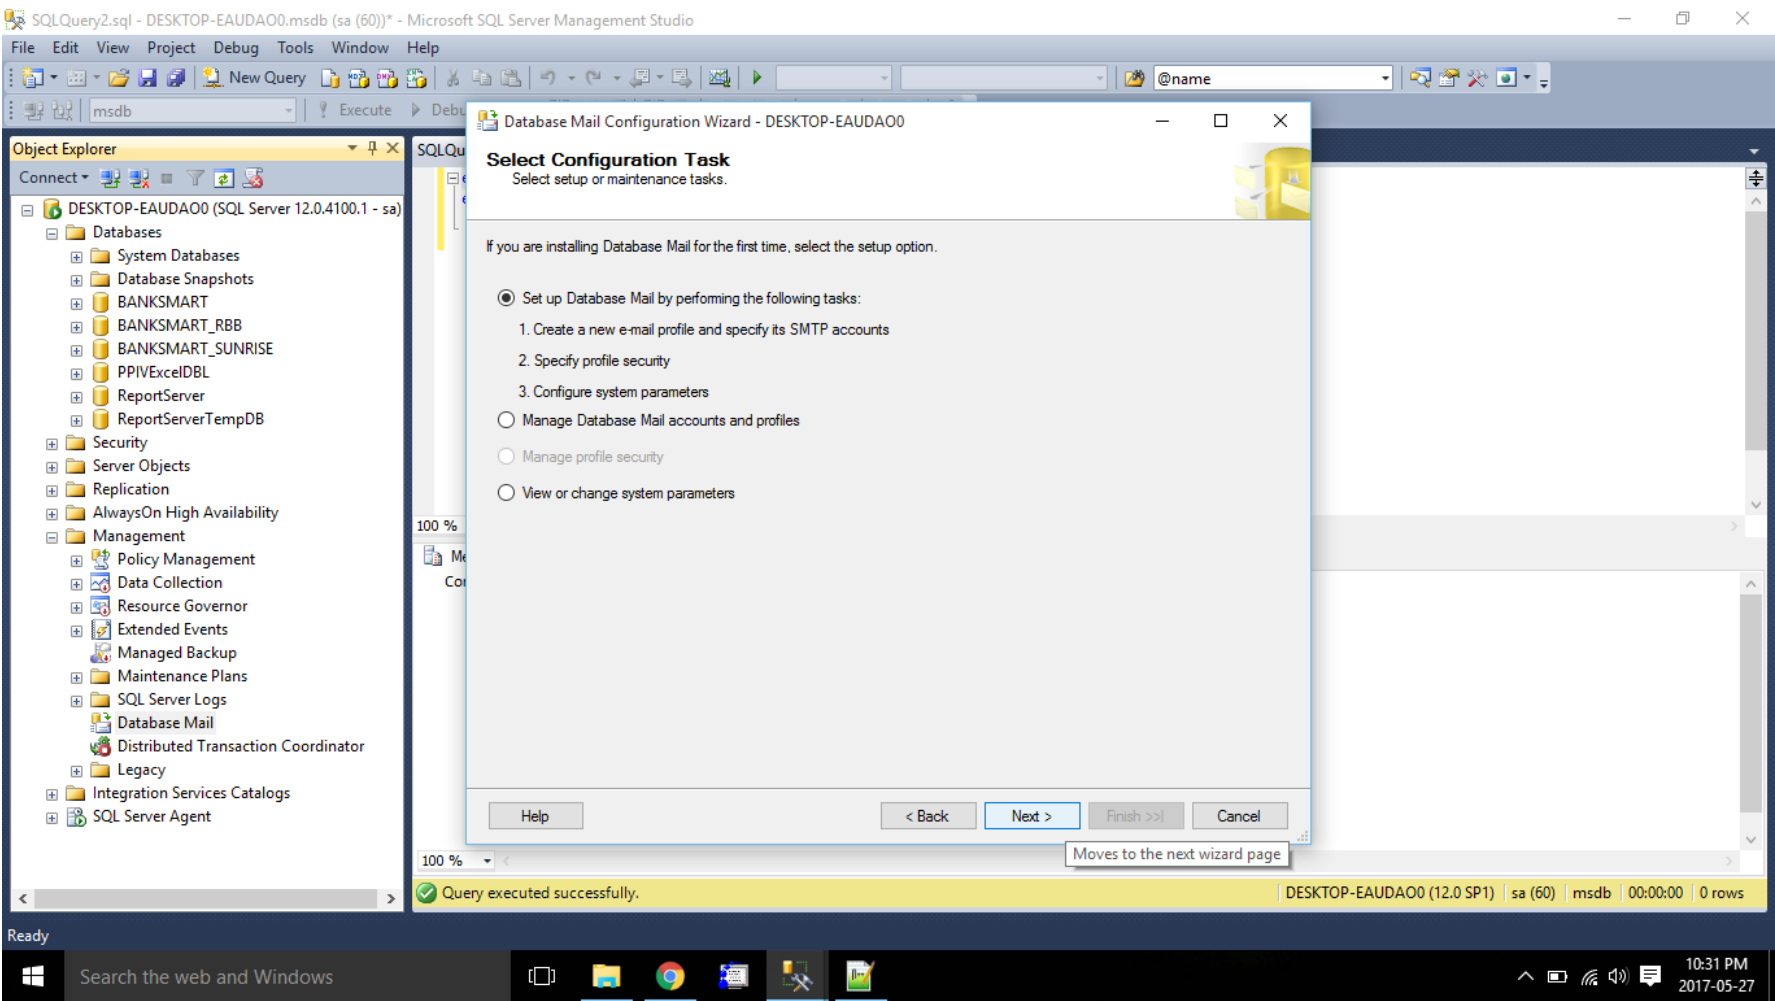

```
RECONFIGURE;
```

```
EXEC sp_configure 'Database Mail XPs',1
```

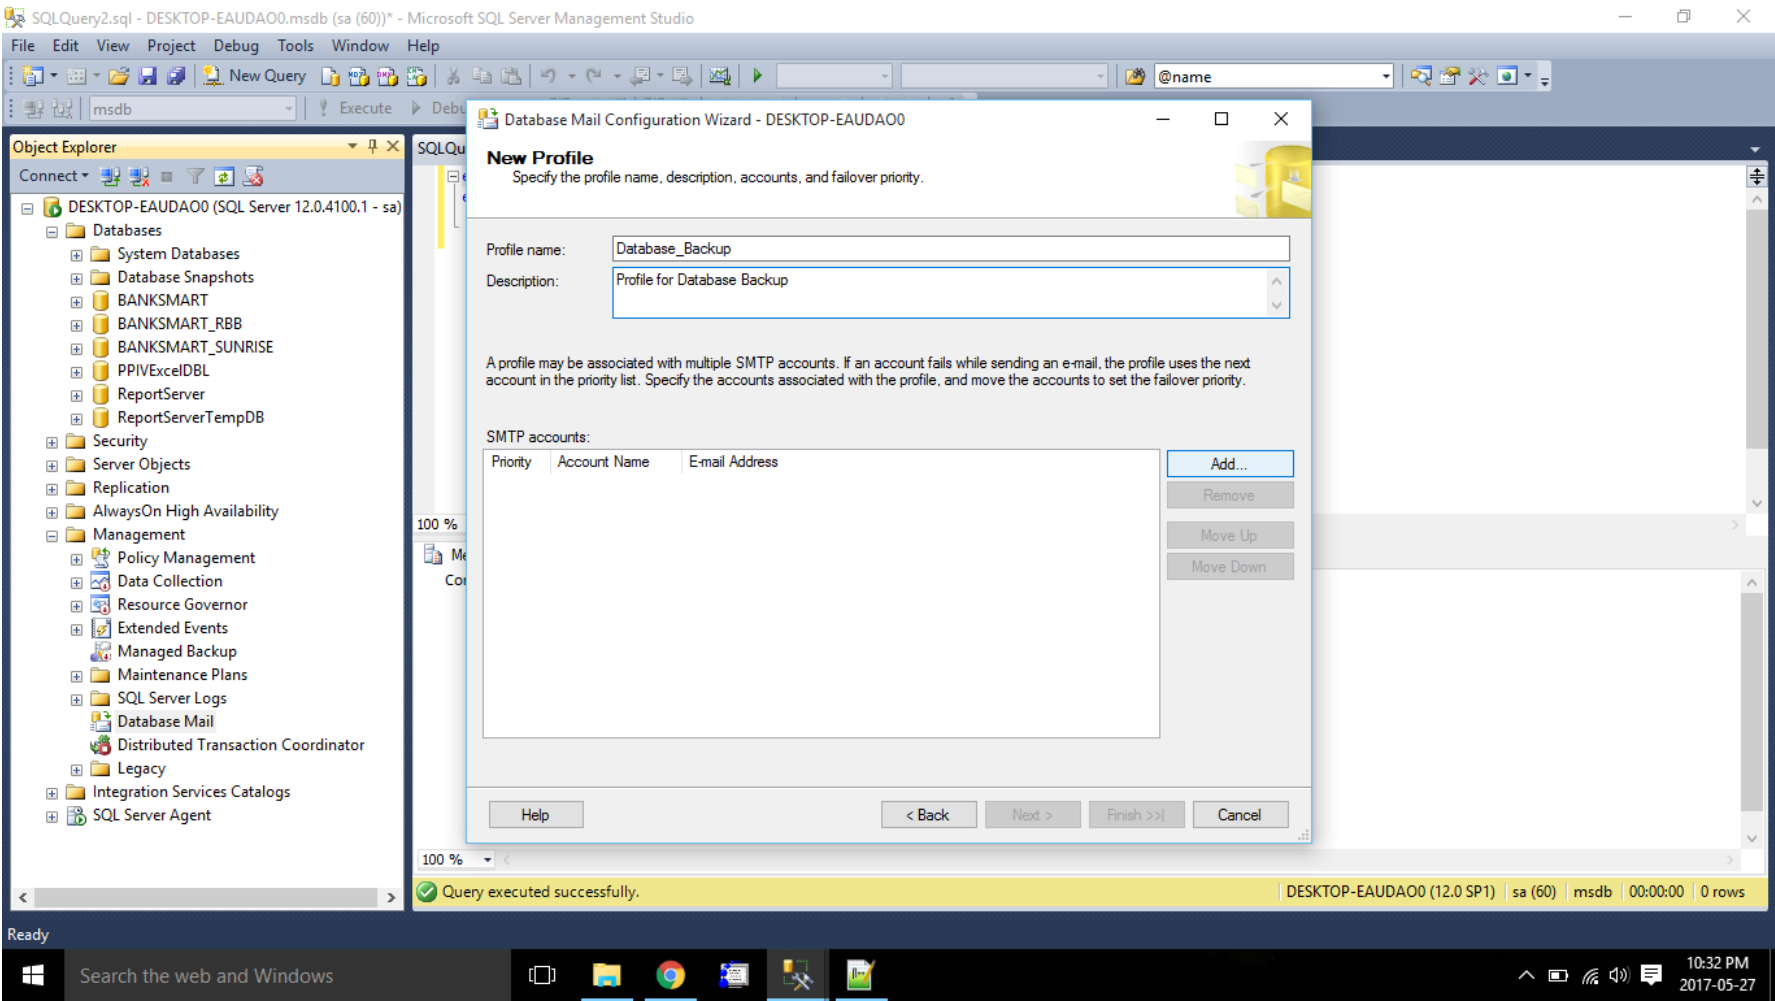

```
RECONFIGURE;
```
